FSR's newest keystone snap-in charging port compatible with USB-C® devices, incorporates power management integrated circuitry to determine power delivery requirements for your cable or connector. This keystone snap-in can be remotely powered from 160 feet or more. The built-in electronics provides the fastest charging using the power available up to 3 amps / 15 watts. The compact snap-in form factor provides a user with an easily installable solution to accommodate their already existing application.

The keystone snap-in is sold in black for simplicity and ease of color matching.

The Keystone Snap-In Charging Port is an effortless option that allows an end-user to add USB-C® charging to their workspace at an extremely budget-pleasing price.

The snap-in's compact form factor allows it to also be easily integrated into our current Pedestal, wall plates, table boxes, floor boxes, and floor raceway.

FSR’s new Symphony combination of USB charging ports incorporates power management integrated circuitry to communicate using today's protocols to determine the power delivery requirements for the connected devices. The built-in electronics directs the available power to a single port or divides the power to provide the fastest charging based on the available power.

**Ports Used Individually**
